Big bag unloading and loading stations

"Stromizmeritel" manufactures several modifications of big bags unloading stations and loading stations.

Big bags unloading stations SRB manufactured by 'Stromizmeritel' are used for agitating and uniform emptying flowing materials from big bags to storage bins or conveying equipment. Bags unloading stations SRM manufactured by 'Stromizmeritel' are used for agitating and uniform emptying flowing and small lumps materials (up to 6 mm) in different industries.

Louvre-type grates of different structure with movable (bending) and fixed flaps manufactured by 'Stromizmeritel' are used to reduce dust emission when unloading dusty materials from big bags and hopper wagons into receiving hoppers. It is possible to use louvre-type grates for overloading of small lumps materials.

In the process of filling bags the big bag loading stations UZB manufactured by 'Stromizmeritel' allow to control the weight of the materials filled as per digital display of the control block. The stations are equipped with air supply nozzles for blowing bags and aspiration pipe-bends for dust-loaded air.

BIG BAGS UNLOADING STATIONS

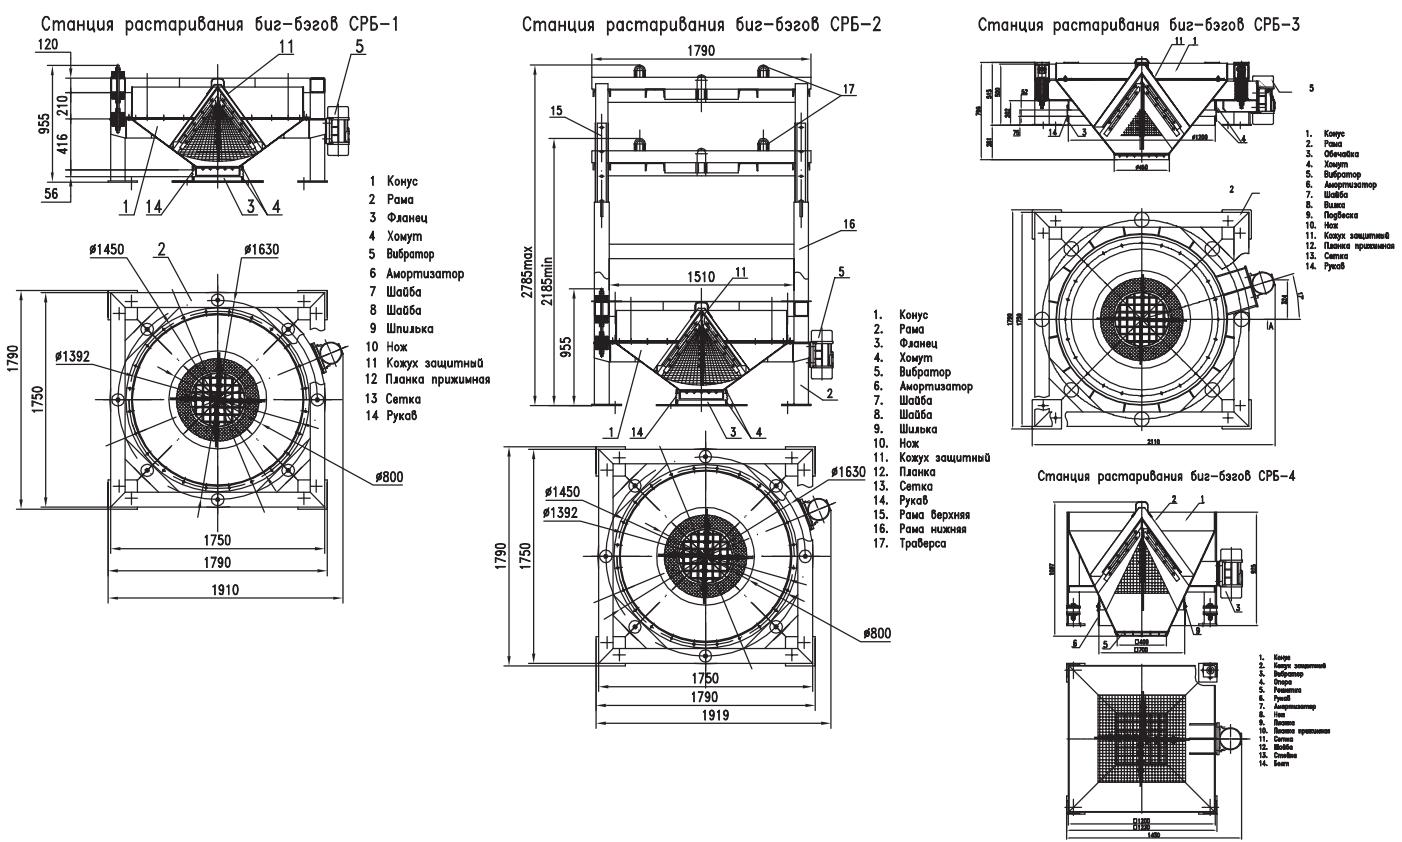

SRB

APPLICATION

The big bags unloading station SRB-1 (СРБ-1) consists of a frame, a conic receiving hopper with a rubber packing and a grid for lumps holdup, knives for big bags cutting and an unbalanced mass vibration generator. In the process of unloading at SRB-1 (СРБ-1) a big bag is held by a lift and transfer mechanism that's why the unloading of different materials is performed sequentially. For parallel unloading of several big bags the unloading station SRB-2 (СРБ-2) is used, the structure of which includes an additional frame, adjustable for height and cross traverse, to which a big bag is fixed. The presence of a traverse allows using the lift and transferring mechanism for other operations after the big bag is fixed for unloading. The station SRB-4 (СРБ-4) has smaller dimensions and is recommended for usage in space-limited process plants.

BASIC TECHNICAL SPECIFICATIONS

Parameter name	SRB-1	SRB-2	SRB-3	SRB-4
Big bag volume, m ³		1,2		
Loading shell size, mm		1390		1200x1200
Power supply voltage, V		380±38		
Watt consumption, kW		0,62 (0,55 for SRB-3)		
SRB mass, kg	470	1500	470	280
Limit load, kg		1000		
Ambient temperature, °C		+5...+40		

BIG BAGS UNLOADING STATIONS

SRM

APPLICATION

Bags unloading stations SRM manufactured by 'Stromizmeritel' are used for agitating and uniform emptying flowing and small lumps materials (up to 6 mm) in different industries.

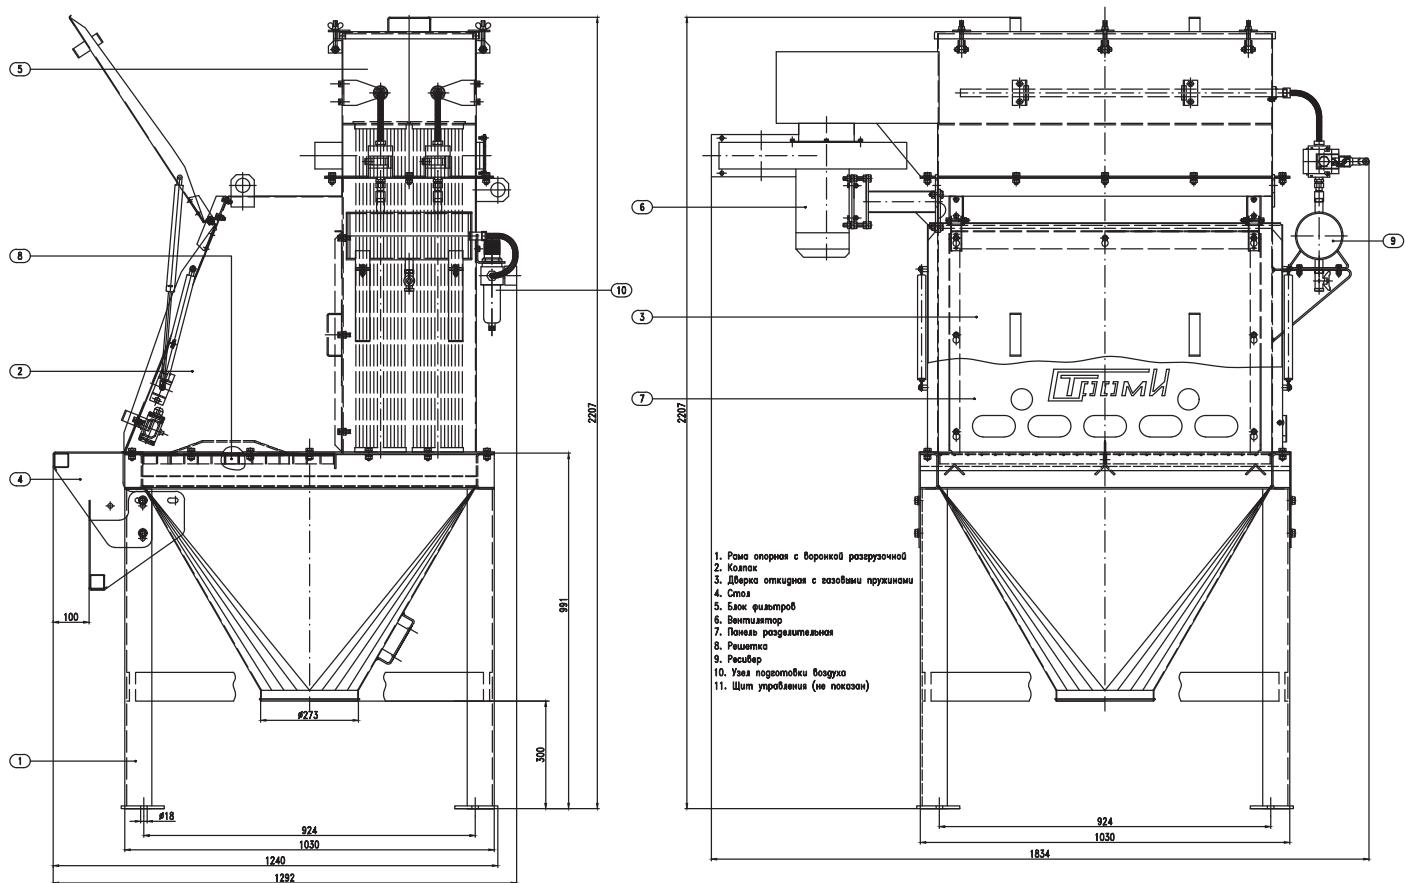

Conditions of the big bag unloading station SRM operation:

- ambient temperature, °C (K).....from 0 to +50 (273...323)
- relative air humidity, %.....90 (at t=25°C)
- atmosphere pressure, kPa (mm Hg),.....84-106,7 (630-800)
- electric power supply parameters are indicated in the table.

BASIC TECHNICAL SPECIFICATIONS

Parameter name	Value
Maximum bag size (length), mm	800
mesh size поверхности опорожнения мешка, мм	33x30
Material moisture content, %, up to	2,0
SRM control	Manual, электропневматическое
Power network characteristics:	
– kind of current	Alternating current
– control network voltage, V	220±22
– power equipment network voltage, V	380±38
– frequency, Hz	50±1
Pressure of pneumatic network supply, MPa	0,5±0,1
Compressed air consumption (under normal conditions), m ³ /min	7,56
Power consumption, kW:	
fan FUK-2100/СП, кВт	0,75
pneumatic distributors EVG342-4D-04FA-Q, ВА	2x12,7
Dimensions (lengthxwidthxheight),mm	1834x1292x2207
Mass, kg, up to	375

BIG BAG LOADING STATION

UZB-1

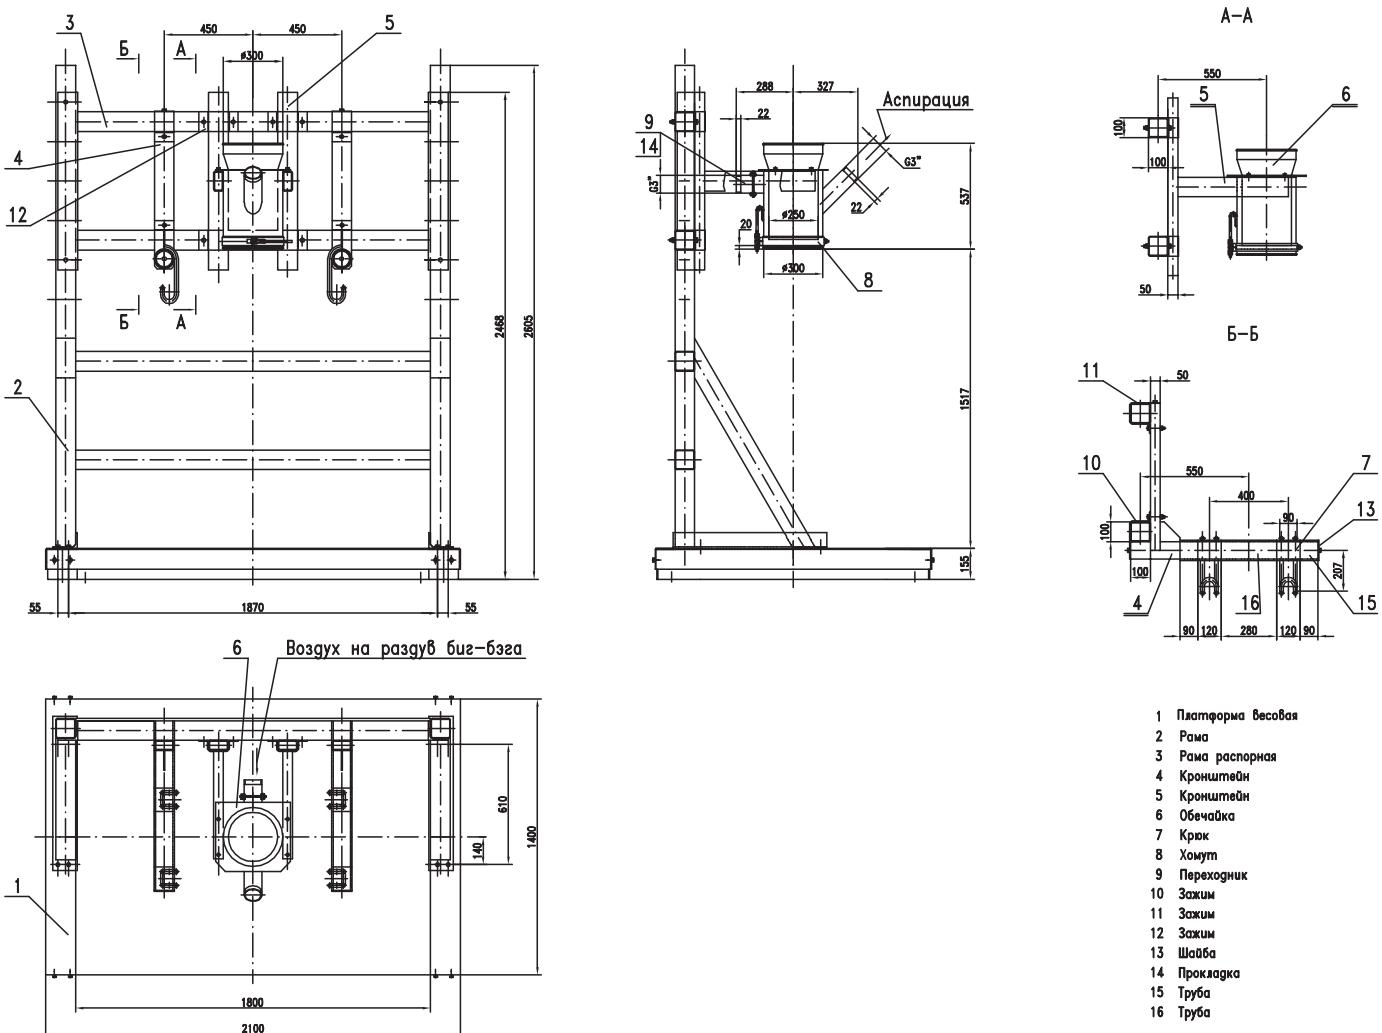

APPLICATION

The big bag loading station UZB-1 is used for big bags dosing loading of dry flowing materials with mesh size up to 50 mm and bulk density up to 2,5 g/cm³ under ambient temperature from +5° to +50° C. In the process of filling bags the big bag loading stations UZB-1 manufactured by 'Stromizmeritel' allow to control the weight of the materials filled as per digital display of the control block. In UZB-1 a big bag is put directly on a strain-measuring platform scales. The stations are equipped with air supply nozzles for blowing bags and aspiration pipe-bends for dust-loaded air.

BASIC TECHNICAL SPECIFICATIONS

Parameter name	Value
The biggest limit of proportioning, kg	2000
The lowest limit of proportioning, kg	500
Limit of permissible variations of the dose weight mean value, kg	1,0
Strain gage transducer type	BSA-1
Strain gage transducer quantity, pcs	4
Dimensions, mm (length × width × height)	1400x2100x2605
Mass, up to, kg	550

BIG BAG LOADING STATION

UZB-2

APPLICATION

The big bag loading station UZB-2 is used for big bags dosing loading of dry flowing materials with mesh size up to 50 mm and bulk density up to 2,5 g/cm³ under ambient temperature from +5° to +50° C. In the process of filling bags the big bag loading stations UZB-2 manufactured by 'Stromizmeritel' allow to control the weight of the materials filled as per digital display of the control block. In UZB-2 big bag is put on an electric truck which moves from a weight-measuring position to a take-off position of the filled big bag. The stations are equipped with air supply nozzles for blowing bags and aspiration pipe-bends for dust-loaded air.

Conditions of the big bag loading station UZB-2 operation:

- ambient temperature, °C (K).....from +5 to +40 (278...313)
- relative air humidity, %.....90 (at t=25°C)
- atmosphere pressure, kPa (mm Hg),.....84-106,7 (630-800)
- electric power supply parameters are indicated in the table.

BASIC TECHNICAL SPECIFICATIONS

Parameter name	Value
The biggest limit of proportioning, kg	2000
The lowest limit of proportioning, kg	500
Limit of permissible variations of the dose weight mean value, kg	1,0
Strain gage transducer type	BSA-1
Strain gage transducer quantity, pcs	4
Control	electric
Power supply voltage of load station control board, V	380 ±38 AC
Electrical network frequency, Hz	50±1
Power consumption, kW	0,75
Gear-motor drive type	W75 U-50 S2 B3 M2SB6 230/400-50 IP55 CLF N
Double-chain drive gearing	t=12,75 mm, i=1
Maximum electric truck speed, m/min	11,5
Dimensions, mm (length × width × height)	3771x1740x3149
Mass, up to, kg	750
